

White, fragrant, 'pea-type' flowers held in pendulous panicles.

Perfect flowers with 5 united sepals and 5 irregular petals.

Fruit is a flat legume that turns brown when mature.

Leaves pinnately compound and alternate; 7 to 9 leaflets; leaflets are arranged alternately on the rachis (most pinnately compound leaves have leaflets arranged oppositely on the rachis).

The base of the petiole is enlarged and covers the bud.

*Cladrastis kentukea*

American Yellowwood (page 1 of 2)

The mature form of the tree is rounded. Height: 30 to 50 feet.

Mature bark is gray and relatively smooth.

The stem is brown and dotted with lenticels. Buds are cone-shaped and densely covered with hair. The leaf scar encircles the bud.

Fall color is yellow (Doggone it we don't have a picture yet.)
